

In house Blood Work

We can run many tests with our blood machines. We can check for infections with our Procyte and check organ chemistries with our Catalyst. With these tests we can help you make sure your pet stays healthy or determines if something is wrong. All blood work is run at the doctor's discretion.

Catalyst – Organ Chemistries:

(Any panel run will be decided by the doctor)

10 Panel

17 Panel

Lyte 4

(Tests for electrolytes)

SDMA and TT4

(Tests for kidney levels and thyroid)

Procyte (Complete Blood Count): Tests for any infection, Anemia and more

Pre-Anesthetic Blood work:

(Blood work is required for all surgeries)

10 Panel & CBC (5 years or younger)

17 Panel & CBC (6 years or older)

Adolescent and Senior Panels:

This includes Chemistries and CBC panels. These tests are great for a baseline incase your pet gets sick. We highly recommend this for older pets as their bodies have more issues as they get older.
